

Hearing (Senses)

The organ for hearing sound is the ear. Sound waves travelling through the ear canal reach the eardrum and bounces off, setting the eardrum to vibrate too. This sets off more vibrations of the ossicles (the three small bones called Hammer, Anvil and Stirrup) inside of the middle. Hearing, or auditory perception, is the ability to perceive sounds by detecting vibrations, Sound may be heard through solid, liquid, or gaseous matter. It is one of the traditional five senses; partial or total inability to hear is called hearing loss. The Inner Ear contains the organs that create our sense of hearing and balance. The Cochlea is the organ in that converts mechanical sound vibrations into. Sense of hearing. Your ears pick up your own sounds and those made by others, human or animal.
