### Abstract

This article makes the argument that humanistic psychology remained a vibrant movement even after it lost much of its high-profile reputation and sociopolitical power toward the close of the 1970s. More specifically, the author makes an argument for the contemporary relevance of humanistic psychology, demonstrating how humanistic psychology has been having a quiet, yet notably significant influence on the diverse areas of the field since the 1990s. In addition, this article demonstrates that there are recent developments occurring in psychology that are highly commensurate with a humanistic viewpoint, even if these developments did not occur via a direct encounter with humanistic psychology. In short, humanistic psychology is shown to be more important to 21st century psychology than many might have realized.

### Keywords

humanistic psychology, contemporary relevance, third force psychology, human science psychology, contextual revolution

The purpose of this article is to provide a brief overview of the ongoing relevance of humanistic psychology within the specifically academic portion of psychology. In other words, this article does not address the more global
